

Joomla! team announce availability of Joomla! 1.5.1 [Seenu]

"We have found in one of the new features of Joomla! 1.5, an XML-RPC Blogger API plugin, a high priority security vulnerability.? While this feature is disabled by default on every Joomla! 1.5 install and would have to be manually enabled for the vulnerability to exist, we strongly recommend that all Joomla! 1.5 users upgrade to Joomla! 1.5.1. "

RELEASE NOTES

Overview?

Joomla! 1.5.1 Fixes a security vulnerability in the XML-RPC Blogger API plugin which allows an unauthorized user to edit, post and delete articles.? It is **strongly** recommended that all Joomla! 1.5 users upgrade to Joomla! 1.5.1, especially if the XML-RPC system is in use.? Other fixes included in Joomla! 1.5.1 include:

- Fixed XML-RPC/Blogger security issue.
- Fix to sef issues including creation of optional livesite parameter if needed which will also allow reverse proxy.
- Change to mass mail so that blind carbon can be used, protecting email addresses of your users.
- Fix to date function that was causing an error in the end publication date for some systems.
- Fixed UTF 8 database detection.
- Addressed a number of internationalization issues.
- Fixes to a number of minor issues

Installing, Upgrading and Migrating

For those people interested in migrating from Joomla! 1.0 please note that this is still an evolving process and is likely to be refined and optimized as feedback is received. For those upgrading from Joomla! 1.5 an upgrade to Joomla! 1.5.1 is as easy as it was to upgrade any version of Joomla! 1.0.x previously.? Further instructions can be found below.
